Homework 6 | Math 256 | Cruz Godar

*Due Wednesday of Week 7 at the start of class*

Complete the following problems and submit them as a pdf to Canvas. 8 points are awarded for thoroughly attempting every problem, and I'll select three problems to grade on correctness for 4 points each. Enough work should be shown that there is no question about the mathematical process used to obtain your answers.

## Section 8

In problems 1–5, evaluate the product.

1.  $\begin{bmatrix} 3 & 0 \\ 6 & -2 \end{bmatrix} \begin{bmatrix} 1 \\ -1 \end{bmatrix}.$

2.  $\begin{bmatrix} 1 & 2 & 3 \end{bmatrix} \begin{bmatrix} 4 \\ 5 \\ 6 \end{bmatrix}.$

3.  $\begin{bmatrix} 4 \\ 5 \\ 6 \end{bmatrix} \begin{bmatrix} 1 & 2 & 3 \end{bmatrix}.$

4.  $\begin{bmatrix} 1 \\ 2 \\ 3 \end{bmatrix} \begin{bmatrix} 4 \\ 5 \\ 6 \end{bmatrix}.$

5.  $\begin{bmatrix} 1 & 0 \\ 0 & 1 \\ 1 & 1 \end{bmatrix} \begin{bmatrix} 1 & -1 & 1 & -1 \\ -1 & 1 & -1 & 1 \end{bmatrix}.$

6. Suppose that for a square matrix  $\mathbf{A}$ , there are matrices  $\mathbf{B}$  and  $\mathbf{C}$  so that  $\mathbf{AB} = \mathbf{I}$  and  $\mathbf{CA} = \mathbf{I}$ . Show that it must be the case that  $\mathbf{B} = \mathbf{C}$ . Hint: multiply both sides of the second equation by something.

7. Let  $A$  be an  $n \times n$  matrix with entries  $a_{ij}$ .

a) For the products  $AI$  and  $IA$  to make sense, what dimension must  $I$  have?

b) The  $i$ th row of  $A$  is  $\begin{bmatrix} a_{i1} & a_{i2} & \cdots & a_{in} \end{bmatrix}$ . If the  $j$ th column of  $I$  is denoted  $\vec{e}_j$ , what is the entry in row  $i$  and column  $j$  of  $AI$ ? Your answer should be in terms of  $i$  and  $j$ .

c) What does part b) imply  $AI$  is equal to? Why does this make sense in the context of function composition?
