

Name: _____

Quiz 3

Math 243

You have 20 minutes to complete this quiz and upload your work to Canvas. Write your answers on a separate sheet of paper and scan them with a scanning app. When you're finished, first check your work if there is time remaining, then turn it in. You may use a scientific calculator or a graphing one, but you may not consult other people or the internet. **Show all your work. 2 points will be deducted for each minute late.**

1. (4 points) Suppose A and B are events such that $P(A) = .2$ and $P(B) = .1$. What condition must be satisfied for $P(A \text{ and } B)$ to equal .02?

2. (8 points) You have a bag of dice that have different numbers of sides and different colors. If you reach in and pull out a random one, the probability that it's blue is .25 and the probability that it has 8 sides is .1. If you remove all the dice except the blue ones, then the probability a random one is 8-sided becomes .5. If instead you remove all the dice except the 8-sided ones, what is the probability a random one is blue?

3. (8 points) Suppose the GPAs of the population of UO students is approximately Normally distributed with standard deviation .75. You sample 30 students from UO and record their GPAs, and find that $\bar{x} = 2.7$. For a confidence level of 95%, what is the confidence interval of this sample? Write a brief sentence explaining what this means.
