Homework 7 | Math 341 | Cruz Godar

*Due Wednesday of Week 8 at the start of class*

Complete the following problems and submit them as a pdf to Canvas. 8 points are awarded for thoroughly attempting every problem, and I'll select three problems to grade on correctness for 4 points each. Enough work should be shown that there is no question about the mathematical process used to obtain your answers.

## Section 8

In problems 1–6, find **two different** bases  $\mathcal{B}$  and  $\mathcal{C}$  for the vector space  $V$  and use them to find  $\dim V$ . Then with the given vector  $\vec{v}$ , find  $[\vec{v}]_{\mathcal{C}}$ .

1.  $V = \mathbb{R}^3$ , and  $\vec{v} = \begin{bmatrix} 1 \\ 2 \\ 3 \end{bmatrix}$ .

2.  $V = M_{2 \times 2}(\mathbb{R})$ , and  $\vec{v} = \begin{bmatrix} 2 & -1 \\ 0 & 1 \end{bmatrix}$ .

3.  $V = \mathcal{L}(\mathbb{R}^2, \mathbb{R}^2)$ , and  $\vec{v} : \mathbb{R}^2 \rightarrow \mathbb{R}^2$  is defined by  $\vec{v} \left( \begin{bmatrix} x \\ y \end{bmatrix} \right) = \begin{bmatrix} 2x \\ x + y \end{bmatrix}$ . (Hint: your answers to the previous problem may help.)

4.  $V$  is the subspace of  $\mathbb{R}^4$  of vectors  $\begin{bmatrix} x \\ y \\ z \\ w \end{bmatrix}$  satisfying  $x + y - w = 0$ , and  $\vec{v} = \begin{bmatrix} 1 \\ 1 \\ 3 \\ 2 \end{bmatrix}$ .

5.  $V = \mathbb{R}[x]$ , and  $\vec{v} = (x^2 - 2)^2$ .

6.  $V = \text{span}\{\cos(x), \sin(x)\}$ , and  $\vec{v} = \sin\left(x + \frac{\pi}{4}\right)$ . (Hint: the sum and difference formulas for sin and cos may be helpful.)

In problems 7–9, find a matrix for the linear transformation  $T : V \rightarrow W$  by choosing bases  $\mathcal{B}$  for  $V$  and  $\mathcal{C}$  for  $W$ . Then use the matrix to evaluate  $T(\vec{v})$  for the given vector  $v$ .

7.  $V = \mathbb{R}^3$  and  $W = \mathbb{R}$ ,  $T : V \rightarrow W$  is a transformation for which

$$T\left(\begin{bmatrix} 1 \\ 0 \\ 1 \end{bmatrix}\right) = 1 \quad T\left(\begin{bmatrix} 2 \\ 0 \\ 1 \end{bmatrix}\right) = 2 \quad T\left(\begin{bmatrix} 0 \\ -1 \\ 0 \end{bmatrix}\right) = -1,$$

and  $\vec{v} = \begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix}$ .

8.  $V$  and  $W$  are both the subspace of  $\mathbb{R}[x]$  of polynomials with degree at most 2,  $T : V \rightarrow W$  is a transformation for which

$$T(1) = x \quad T(x^2 + x) = 2x \quad T(x^2) = x^2,$$

and  $\vec{v} = x^2 - x - 1$ .

9.  $V = M_{2 \times 2}(\mathbb{R})$ ,  $W = \mathbb{R}^2$ ,  $T : V \rightarrow W$  is a transformation for which

$$T\left(\begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}\right) = \begin{bmatrix} 2 \\ 0 \end{bmatrix} \quad T\left(\begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix}\right) = \begin{bmatrix} 0 \\ 2 \end{bmatrix} \quad T\left(\begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}\right) = \begin{bmatrix} 1 \\ 1 \end{bmatrix} \quad T\left(\begin{bmatrix} 0 & 0 \\ 0 & 1 \end{bmatrix}\right) = \begin{bmatrix} 1 \\ 0 \end{bmatrix},$$

and  $\vec{v} = \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix}$ .
